Funded Projects

Capital Improvement Program Project Details

Project Title: **Annual Water Main Replacements**

Project Description: The 2015 Water Master Plan identified the need to replace approximately 7,000 feet of 6" and 8" water main in: Notre Dame Avenue from Ellen Place to County Road, Ann Arbor Avenue, Stanford Avenue and Titus Avenue from Olive Street to County Road. This project will also fund the inspection, assessment, and rehabilitation of existing water mains. This effort will help reduce leaks and effectively optimize raw water capture and conveyance for potable water production. Rehabilitation methods can include cured-in-place pipe (CIPP) installations, pipe jacking, and/or removal and replacement of piping and associated infrastructure.

(Project description changed in FY 23-24)

Project Title: **Canon Waterline Rehabilitation**

Project Description: The Canon waterline conveys the City's local surface water from the San Antonio and Evey Canyons intake structures to the Pedley Filtration Plant for raw surface water treatment. This project consists of the inspection, assessment, and rehabilitation of piping, and associated appurtenances. This effort will help reduce leaks and effectively optimize raw water capture and conveyance for potable water treatment and production. Rehabilitation methods can include cured-in-place pipe (CIPP) installations, pipe jacking, and/or removal and replacement of piping and associated infrastructure.

Project Title: ***Electrical Improvements and Upgrades Phase I***

Project Description: This category of projects covers electrical upgrades at various treatment and pumping facilities that will be selected in the fiscal year the funds are budgeted. Additionally, when electrical failures occur and require repair, this project description will be updated and returned to Council for approval. As sites are determined to require improvements, and are ready for design and construction, staff will present to Council for approval.
 In FY 24-25, staff will work on a design-build project to update selected electrical equipment at Anion Exchange Plant (AEP), Booster Pump Station No. 2 (B-2), Well No. 6, Booster Pump Station No. 8 (B-8), and Booster Pump Station No. 12 (B-12).

Project Title: ***Pedley Filtration Plant Upgrades***

Project Description: The City's local surface water facilities include the existing Pedley Filtration Plant, originally constructed and permitted in 1962 and with a current capacity of up to 4 million gallons per day. The plant treats surface water from the Canon waterline connecting the San Antonio and Evey Canyons to meet the City's potable water demands. This project provides for the removal and replacement of the fouled porous plate, filter backwash carriages, filters, programmable logic controllers, panels, and associated appurtenances to improve overall automation, filtration and treatment performance. These upgrades are crucial for ensuring operational efficiency, regulatory compliance, and long-term sustainability of the treatment plant, while minimizing downtime and optimizing resource utilization.

Project Title: **Pipeline Replacement Phase I**

Project Description: Annually staff evaluates the City's pipelines and makes a determination of how much and which pipelines need replacement. The budgeted amount for this year's pipeline replacements is based available funding and the need for other Water system replacements. Staff assumes a savings of 15 leaks per year will be eliminated at a cost of \$5000 per leak will be saved as a result of the pipeline replacements.

Project Title: **Reservoir/Treatment/Production Rehabilitation**

Project Description: Throughout the year facilities are identified as needing rehabilitation. This infrastructure includes reservoirs, which may need minor repairs to a major rehabilitation including patching, coating, inlet/outlet replacements, and roof patching and replacements. Production rehabilitations can include well rehabilitations, well pump and booster rehabilitations and associated piping replacements. Treatment rehabilitations can include rehabilitations of SCADA equipment, monitoring equipment, and vessel coatings.

Project Location

Project locations are identified during the fiscal year to best allocate resources with the utilities' demands.

Capital Improvement Program Project Details

Project Title: **Water Facilities - Site Improvements and Upgrades**

Project Description: This project includes site improvements at various water treatment and production facilities. Specific facilities will be targeted based on maintenance and operational prioritization criteria. These site improvements include, but are not limited to, hardware, associated software, programming tools, mechanical and electrical components, site monitoring, and infrastructure protection.
 In FY 24-25, the Reservoir 5 site at 460 E. La Verne Avenue requires several improvements. These improvements include the replacement of Booster Pump Station No. 2 along with the associated structures. These structures include an above-grade facility, new pumps, electrical equipment, instrumentation, valves, piping, and all associated appurtenances supporting this project. Additional electrical transformer and service repairs are required.

Project Title: ***Water Treatment - Volatile Organic Compound Treatment Plant***

Project Description: Within the City of Pomona, there exists a portion of the adjudicated Chino Groundwater Basin area. There are multiple existing City owned and maintained groundwater production wells within the Chino basin. The groundwater well water quality is regulated by the State of California Water Resources Control Board (WRCB). Based upon recent groundwater quality field sampling reports, there are some well sites with elevated volatile organic compound (VOC) concentrations. VOC treatment plant infrastructure is required to address elevated VOC concentrations and comply with the WRCB regulations. These VOC plant improvements will support water supply from the Chino Basin groundwater wells. Well production sites 10 and 34 require VOC treatment improvements. This project will be used to assess, improve, design, and construct applicable VOC treatment plant infrastructure. This project includes all materials, site/infrastructure improvements, studies, and work to support compliance with these groundwater well production quality WRCB regulations.
